Instruction Manual

Contents

1 Setup Instructions

Lendr is a simple renting web application. In order to run our project, you will need a few resources.

1. Github
The first step is to download our code from Github using the following link:
https://github.com/adityadhingra07/Lendr-CS408/archive/bugged-branch.zip

2. NPM
Install npm and then run the following commands to start the project. Run the following commands in the directory that you just pulled:
- *npm install*
- *npm start*

The web application should now be up and running on port 8080. Go to http://localhost:8080

3. Google Account
In order to authenticate through Lendr, you will need a valid Gmail. Click on "Sign in with Google" and input your valid Google credentials.

Now you're ready to start using Lendr!
